

# JFS CAN Data Report Instructions

## Open the Starter App

1. In Docker Desktop, search for “Degauss/shiny\_starter”
  - A. “Pull” the container
2. Once the container is in your Desktop, find it and hit “Run”
  - A. In the popup box, expand the options and in the space marked “Local Host”, type in “3838” and hit Run
3. Navigate to the Containers page and in your line for the shiny\_starter, click to button to open in browser
4. Now that you’re in the app, you can upload your .csv file
5. After the upload, the app will show you a sample of your original file and the prepared file for use in the next program.
6. Click the button to download the prepped file
7. Now in PowerShell, navigate to your Downloads folder (it may be as simple as typing “cd Downloads”)
8. Copy & paste the first Docker command into PowerShell and hit enter
9. Repeat for the 2nd and 3rd Docker commands, all in the Downloads folder
10. After the 3rd command, you should have the final output, “monthly\_report\_v5.0.1.csv” that you can send along to Cole & Andrew
